The Holding Space

Anatomy of a Woven Wrap

A custom, supportive carrier for every stage of parenthood.

Middle Marker — The center tag of the wrap, used to align symmetrical carries.

Top Rail — The upper edge of the fabric.

Bottom Rail — The lower edge of the fabric.

Pass — Each individual layer of fabric wrapping over or under baby for support.

Seat — The fabric hammock tucked under baby's bottom from knee to knee.

Tails — The tapered ends of the wrap left hanging after tying the knot.

Base Size — The wrap length required to tie a standard Front Wrap Cross Carry with a secure double knot.

GSM — Grams per Square Meter : Fabric weight and thickness — lower GSM is breezy and moldable for newborns; higher GSM adds cushioning for toddlers.
